Portfolio

EDUCATION

REVA University, Bengaluru

B.Tech — Computer Science & Engineering (IoT & Cyber Security incl. Blockchain)

CGPA: 8.9 / 10 • Expected 2028

Class XII: 81.89% | Class X: 86.20%

TECHNICAL SKILLS

AI/ML & Cybersecurity
Machine Learning, Deep Learning, PyTorch, CNN-LSTM, Computer Vision, AI Agents, RAG, Federated Learning, Network Intrusion Detection, Phishing Detection, Threat Detection & Response, Browser Security

Languages
Python, Java, Kotlin, JavaScript, TypeScript, SQL

Mobile & Full-Stack
Android Development, Jetpack Compose, CameraX, ML Kit, React, Next.js, Three.js, FastAPI, Flask, Spring Boot, REST APIs

Databases, Cloud & Tools
MySQL, SQLite, LanceDB, AWS, Docker, Git, GitHub, Flower, Ollama

CERTIFICATIONS & ACTIVITIES

- IBM SkillsBuild — Data Fundamentals (Dec 2024)
- Adobe University Hackathon — Participant (2026)
- Stack Fusion Fest — 24-Hour Hackathon (2025)
- Code Quest 2.0 — Phase 1 Participant (2025)

PROFESSIONAL SUMMARY

Computer Science undergraduate with an 8.9/10 CGPA and hands-on experience building AI/ML, cybersecurity, mobile, and full-stack systems. Focused on applied machine learning, intelligent security systems, and scalable software engineering using Python, Java, Kotlin, TypeScript, PyTorch, React, FastAPI, and Spring Boot.

EXPERIENCE

Cyber Security Intern — InTrainz *Jun 2025 – Aug 2025*

- Completed a paid Cyber Security internship with an integrated industry training phase.

PROJECTS

SENTINEL.GRID — Federated AI Cyber Defense Platform

- Built a real-time network intrusion detection system using a CNN-LSTM model trained on CICIDS2017, achieving 98.85% accuracy across DDoS, port scan, brute-force, web attack, and normal traffic classes.
- Implemented Flower-based federated learning across 3 edge nodes with FedAvg and differential privacy (ε=1.0), alongside automated IP blocking, rate limiting, and honeypot responses.

Tech: *PyTorch, CNN-LSTM, Flower, Federated Learning, FastAPI, React*

PROJECT 117 — Sovereign Industrial Intelligence Platform (Completed)

- Engineered a refinery digital-twin platform spanning 58 equipment assets, 224 sensors, 60 process connections, and 18 process areas, with fault simulation, event streaming, recovery actions, verification, and audit trails.
- Built a multi-agent incident-response pipeline combining RAG, topology-aware validation, independent verification, human approvals, and persistent audit logging; validated with 368 passing backend tests and a successful production build.

Tech: *Python, FastAPI, Next.js, TypeScript, Kotlin, Jetpack Compose, Ollama, LanceDB, SQLite, Docker*

ECO-GUARDIAN — AI Environmental Hazard Reporting System

- Developed an AI-agent workflow that accepts environmental hazard images, performs Vision AI detection, and uses a second agent for cross-validation before producing confidence-scored reports.
- Built a React + Three.js interface with 3D Earth visualization, incident tracking, analytics, agent-health monitoring, and automated routing of verified reports.

Tech: *AWS, AI Agents, Vision AI, React, Three.js, Generative AI*

PHISHING SITE DETECTION — ML-Powered Browser Security Extension

- Browser extension backed by a Flask ML API; classifies URLs via engineered indicators (length, IP usage, suspicious keywords, HTTPS, domain structure, redirects), combining trusted-domain validation with ML probability thresholds to return phishing/safe predictions with confidence scores.

Tech: *Python, Machine Learning, Flask, JavaScript, REST API, Feature Engineering*

SMARTSHOP — Full-Stack Product Management System

- Admin dashboard (React/Vite/Tailwind CSS) with a Spring Boot backend — Spring Security, JWT authentication, REST APIs, JPA/Hibernate, MySQL — implementing protected product CRUD functionality.

Tech: *React, Vite, Tailwind CSS, Spring Boot, Spring Security, JWT, MySQL*

APARTMENT MANAGEMENT OS (In Development)

- In-development apartment operations platform for independent and mid-sized communities, covering resident management, maintenance, billing/finance, complaints, and communication, with future AI-driven operations planned.
